

Togo Native Plant Nursery Project Notsé, Togo

Area of Interest

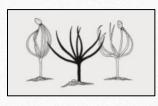

Why Togo?

- One of the highest rates of deforestation globally
- Highest deforestation rate in Africa
- Collaboration between ICPSD and the University of Idaho's CFNSR

University of Idaho
College of Natural Resources

CFNSR

Project Goals

- Properly **identify seed sources** for native tree species to use in nursery production
- Engage and train local staff in best management practices, long-term tree care and monitoring activities
- Grow and outplant these seedlings in the Notsé area
- Build local partnerships across public and private organizations
- Promote project visibility through educational outreach

Monitoring

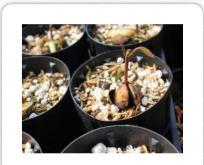

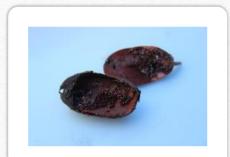

Record Keeping

Seed Procurement Challenges

- Local names for species largely don't match research/literature
- Lack of seed collection guidelines and zones
- Seed types in general (common to procure moldy seed)
- Easier to source non-native species

Seed Use Challenges

- Need for seed storage
- Seeds are soaked in dirty water
- Germination issues, especially damning off
- Communication is hard

Successes

- Excellent germination on several nursery species
- Interest and continued engagement locally and nationally
- Physical nursery structure in place

Continued c

Looking to the Future

- Secure a wider variety of seed sources to protect genetic diversity
- Establish the first in-house seed storage in Togo
- Determine seed cleaning needs and develop species-specific techniques
- Next phase(s) of technical workshops with nursery staff
- Design and install outplanting plan(s) for long-term monitoring
- Continue education and outreach with student groups

Acknowledgements

- Dr. Anthony S. Davis
- Dr. Randy Brooks and Dr. Romuald Afatchao
- Institute of Community Partnerships and Sustainable Development (ICPSD)
- University of Idaho College of Natural Resources and the Center for Forest Nursery and Seedling Research (CFNSR)
- Lab group and current/former Togo team members
- My ladies!
- In-country contacts, including translators, foresters, researchers, students, and other NGO partners
